HACK876 × SEEED STUDIO

PRIVATE PARTNERSHIP BRIEF

Give students a network they build themselves

Hack876 gives Jamaican high-school students one day to turn an idea into something real. We would love Seeed hardware on the table when they do.

Kingston, Jamaica · Feb 20, 2027 (tentative)

80
STUDENTS

9
SCHOOL NETWORK

1
DAY

One day to build something that should exist.

01 WHAT IS HACK876?

Meet Hack876.

Hack876 is a one-day build competition for approximately **80 secondary-school students** from 5th Form through Upper 6th Form, working in teams of 3 to 4, roughly 20 teams in all, on Saturday, February 20, 2027 (tentative).

Teams pick a real problem, use modern tools including AI, get guidance from mentors, and finish the day with a working prototype and a pitch to judges. It is not a school assignment and there is no answer key.

Our **9-school network** in Kingston is made up of the schools where the Hack876 team currently has relationships and can coordinate most reliably. It is not an exclusive eligibility list.

BUILD SOMETHING THAT SHOULD EXIST.

Technology is for everyone who builds.

Hack876 students spend the day building for their own communities. A mesh network they can hold in their hands is a great place to start.

SEEED STUDIO MISSION

“Making Technology Accessible”[2]

Seeed opened its Meshtastic Hardware Sponsorship Program to lower the barrier for technical workshops and community-led infrastructure projects.[3]

Approved workshops get a standard hardware package so participants can build a complete Meshtastic network and have a hands-on experience.[1]

Seeed's sponsorship application lists STEM students and educators as a target audience.[4]

Through Seeed for SDGs, Seeed supports projects with positive social impact that apply open technology to real-world issues.[2]

Hardware where communities learn.

PROGRAM

Meshtastic Community Sponsorship

10 Meshtastic DIY kits, a SenseCAP T1000-E and a Wio Tracker L1 for approved workshops, with upgrades for larger events or richer content.[1]

EDUCATION

Seeed Education

Seeed's education team takes requests for free samples or collaboration from educators.[5]

PARTNERSHIP

Global Workshop Partnership

City co-hosts run workshops, hackathons or bootcamps with Seeed hardware kits, workshop guides and engineering assistance.[6]

COMMUNITY

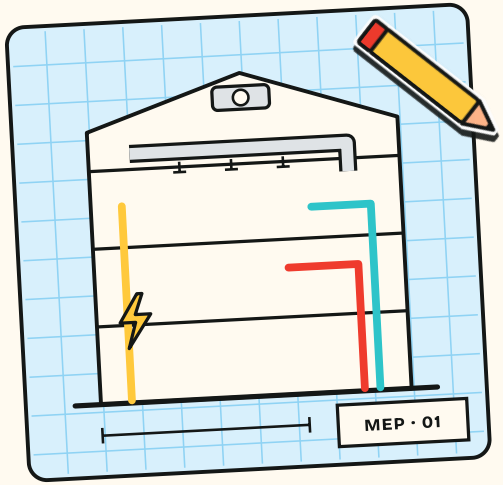

Chaihuo Makerspace

Shenzhen's first makerspace, powered by Seeed since 2011.[2]

COMMUNITY

Maker Faire Shenzhen

Now the Greater Bay Area International Maker Summit, with over 500,000 participants since 2012.[2]

Seeed already backs makers who learn by building together. Hack876 would be one more room full of them, in Kingston.

04 THE SCHOOL NETWORK

9 schools. One room.

Hack876 begins with the schools where we already have relationships and can coordinate most reliably for the inaugural staging. Formal confirmations are still in progress, and the network is not an exclusive eligibility list.

- Hillel Academy
- Campion College
- Jamaica College
- Immaculate Conception High School
- Wolmer's
- Ardenne High School
- American International School of Kingston
- St. Andrew High School for Girls
- St. George's College

There are two natural homes for this inside Seeed.

Seeed asks organisers to apply at least 3 weeks before the event date, with a shipping address and phone number.[4]

COMMUNITY PROGRAM

Meshtastic Community Sponsorship

- We apply through Seeed's Meshtastic Sponsorship Application once the Hack876 date is confirmed
- At least 3 weeks before the event, plus extra time for shipping and customs into Jamaica
- We commit to the standard deliverables, and to a higher-quality one if we ask for more kits

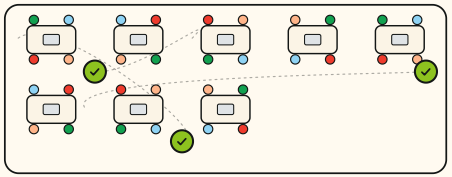

EDUCATION

Seeed Education

- Seeed's educator form, or the education team at education@seeed.cc
- A good fit for Grove sensor kits for teams on the Hardware build type
- Teachers in our schools keep building with Seeed after the day

Seeed's contribution does not have to be purely financial.

PEOPLE IN THE ROOM.

01
Kit walkthrough

A short call before the day so our hardware mentors know the kits inside out.

02
Engineering Q&A

Someone from Seeed reachable for a tricky setup question during the build.

03
Award presenter

Someone from Seeed presents the proposed award, by video.

04
Judging adviser

A Seeed engineer helps shape the hardware criteria. The judging panel makes the final call.

05
Content partner

Seeed shares our recap and project write-ups on its own channels, with student photos only where parents or guardians have consented.

GROUND RULES WE WILL HOLD OURSELVES TO

Low-voltage hardware only, always under adult supervision. No mains wiring, and no opening or modifying batteries.

No student data shared with Seeed. Photos of students go out only with parent or guardian consent, and attendee feedback is shared without names.

No marketing to students. Seeed's name appears on our slides and printed materials as its program asks, never in sign-up or sales drives aimed at students.

07 THE ASK

Real radios. Real networks. Built in a day.

Seeed's Meshtastic kits for teams on the Hardware build type: small LoRa boards that join up into an off-grid mesh network. Teams that want them use them, nothing about the event depends on them, and every kit is used under adult supervision.

Possible structures:

- **Shared hardware table: kits live at one supervised station, and teams sign them out and return them at the end of the day.**
- **Kits per team: each hardware team builds its own node, and every node joins one shared mesh across the room.**
- **Prizes: kits go home with winning teams, through their schools, so they keep building.**
- **Whatever Seeed recommends instead, including the mix of kits, trackers and Grove sensors that works best.**

AGE AND ACCOUNT TERMS

Every kit is low-voltage and used only at supervised stations with an adult hardware mentor. Students do not open, modify or swap batteries. Seeed's wiki recommends a qualified 3.7V lithium battery with a protection circuit for these kits, and we would follow that and every other Seeed safety note. Meshtastic devices need the right LoRa region set, so before the day we will confirm with Seeed which frequency variant suits Jamaica and that its use here is permitted. Seeed's standard shipping terms are DAP, with duties and clearance fees paid by the receiver, so Hack876 would plan for those and allow extra time for customs. Seeed has not agreed to any of this, and we will follow its advice.

Hardware Partner · Inaugural Hack876

Every option at a glance.

THE ASK

Access

INAUGURAL HACK876

Seeed's Meshtastic kits for teams on the Hardware build type: small LoRa boards that join up into an off-grid mesh network. Teams that want them use them, nothing about the event depends on them, and every kit is used under adult supervision.

BEST OFF-GRID BUILD, POWERED BY SEEED STUDIO (PROPOSED)
One award, shaped together.

Proposed

IN-KIND & COMMUNITY SUPPORT
Devices, Gift cards, Meals, Refreshments, Supplies, Connectivity, Expertise.

In kind

PEOPLE IN THE ROOM
Kit walkthrough, engineering Q&A, award presenter, judging adviser, content partner.

Time

The size of the commitment can change. The invitation to be part of the first one does not.

09 A DIRECT LINE

There is no faceless sponsorship process here.

This proposal is for **Meshtastic Community Sponsorship team, Seeed Studio**.[1]

If Seeed is interested, we can decide together what involvement should actually look like.

QUESTIONS WE WOULD ANSWER TOGETHER

- ✓ How many teams will use hardware, and how many kits do you need?
- ✓ Who supervises the hardware, and what experience do they have?
- ✓ Which deliverables will you commit to, and how will you handle photos of minors?
- ✓ Who receives the shipment in Kingston and clears customs?
- ✓ Which LoRa frequency variant is right for Jamaica?
- ✓ Have you run an event like this before?

A conversation, not a workload.

Deliberately focused.

Our vision is national. This inaugural staging does not have national-event resources, and we will not pretend it does.

Approximately 80 students. A school network of 9 in Kingston. One day, done properly.

Build the first one well.
Learn from it.
Earn the right to make the second one bigger.

2027

Help make the first Hack876 happen.

No multi-year commitment required.

FUTURE POSSIBILITIES, ONLY IF BOTH SIDES FIND IT VALUABLE. NOT COMMITMENTS.

- A pre-event Meshtastic workshop for teachers and students in our schools.
- A student-built mesh linking Hack876 schools across the year.
- Public write-ups of winning hardware projects for Seeed's community.
- Hack876 workshops through Seeed's Global Workshop Partnership as we grow.
- Grove sensor kits in school clubs that build all year, not just on the day.

HACK876 × SEEED STUDIO

Somewhere in that room may be a future founder, engineer, designer or leader.

They do not need us to decide who they become.

They need an opportunity to begin.

HELP US BUILD THAT OPPORTUNITY.

We would love to explore the right first step with the Seeed Studio team.
