

Put Claude in the hands of Jamaica's next generation of builders.

Hack 876 is bringing secondary-school students across Jamaica together for one day to turn ideas into working prototypes.

We're asking Anthropic for one thing: **Claude API credits for the student teams building them.**

They shouldn't have to wait until university.

The students entering Jamaica's universities in 2028, 2029 and 2030 will enter a world where building software with AI is ordinary.

Hack 876 gives them a head start. Claude can be part of how they learn to build.

01

Think

Find a problem worth solving and decide what matters.

02

Build

Turn the idea into a working prototype in a single day.

03

Explain

Defend what they made, and why, in front of judges.

Not because it can give them answers. Because it can help them think.

“Guiding rather than answering.”

Anthropic · Introducing Claude for Education · April 2025

Anthropic has positioned Claude in education as a tool that develops independent thinking rather than replacing it, and in July 2026 extended that work to verified US K-12 educators with Claude for Teachers. That is the behaviour Hack 876 wants to encourage.

Students still choose the problem.

Students still make the decisions.

Students still build.

Students still explain why their solution deserves to exist.

Claude becomes a collaborator. Not the project.

Experience compounds.

Anthropic's Economic Index has explored a simple pattern: people appear to get better at working with AI through experience.

The implication for education is simple. A student's first meaningful work with frontier AI should not have to wait for university or the workforce.

Let Jamaica's young builders start learning now.

10%

higher conversation success rate among higher-tenure Claude users

48%

of per-capita usage is concentrated in the top 20 countries

"...it could also be evidence of learning-by-doing, where people get better at using Claude through experience."

[Anthropic Economic Index · Learning curves · March 2026](#)

Anthropic has already paired AI literacy with access elsewhere, through its partnership with Rwanda's government and ALX. [Economic Index · January 2026](#)

ONE ROOM. ~80 BUILDERS.

~80

SECONDARY-SCHOOL STUDENTS

4-5

STUDENTS PER TEAM

1

DAY TO BUILD

Hack 876 is being built through relationships across Jamaica's secondary-school community, for students in 5th Form through Upper 6th Form, about 20 teams in all.

Hillel Academy

Campion College

Jamaica College

Immaculate Conception High School

Wolmer's

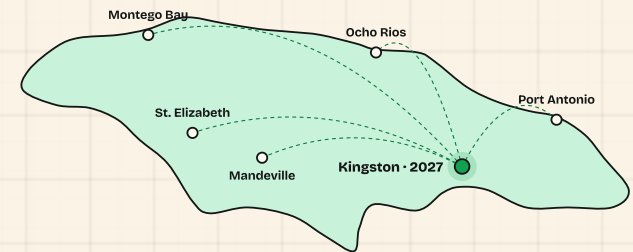

Ardenne High School

American International School of Kingston

St. Andrew High School for Girls

St. George's College

Participation is not restricted to these 9 schools. Students from outside supported arrangements may need to arrange their own transportation and lodging.

Give every team a frontier AI collaborator.

CODE

Debug, prototype and understand unfamiliar code.

PRODUCT

Pressure-test ideas, scope features and structure solutions.

RESEARCH

Explore a problem quickly and challenge assumptions.

DESIGN

Turn rough concepts into clearer product experiences.

COMMUNICATION

Explain what they built, and why it matters.

Augmentation and learning. Not a shortcut past either.

Give the builders credits.

We're asking Anthropic to provide Claude API credits for teams participating in Hack 876.

Claude for Education already invites student builders to apply for API credits. [Anthropic · April 2025](#) This is the same idea, for a room of them.

No sponsorship fee.

No tier.

No oversized branding requirement.

Just access to the tool.

STRUCTURE, LEFT OPEN ON PURPOSE

- Credits allocated to Hack 876
- Team-level access through an event account
- Any other structure Anthropic recommends

Many participants are minors. We will work with Anthropic to structure access in whatever way is appropriate for student safety, platform policy and responsible API use. We do not assume students can hold individual API accounts.

07 IF ANTHROPIC WANTS TO DO MORE

And if you want to show up too, the door is open.

MENTOR

Spend part of the build day helping teams think through problems.

JUDGE

Help evaluate what Jamaica's young builders create.

SPEAKER

Give students a short glimpse inside frontier AI building.

CHALLENGE

Recognize an exceptional use of Claude.

None of these are required. Remote participation, or educational material and responsible-use guidance, would be just as welcome.

The next great AI builder may already be sitting in a classroom in Kingston.

Let's give them something worth building with.

Stefen O. Ewers Jr.

Organizer, Hack 876

Georgia Tech graduate student · Claude Campus Ambassador, Georgia Tech

Hack 876 is independently organized by Stefen Ewers and is not an Anthropic or Claude Campus Ambassador program event. Stefen is a Claude Campus Ambassador at Georgia Tech, but this project sits outside the scope of that role. This brief is a proposal; no partnership currently exists.
